

Press release, 31 January 2024

Stardust to share smart city insights and experience at the final conference in Pamplona

The 6-year project will share its insights on mobility, ICT, smart districts and energy at its final conference in Pamplona at the end of February. The Consortium partners will discuss the achievements in the Lighthouse and Follower Cities and what these mean for the future

After six years, Stardust comes to an end.

From 28 to 29 February, the city of Pamplona will host Stardust's final conference. Through keynote speeches, panel discussions, and technical visits, the project partners will come together to portray the legacy of this **major 6-year Smart City project**.

It will mark the end of the project and **the beginning of a new era of climate neutrality in the cities** that can be more ecological, more citizen-centered, and more intelligent in approach.

Stardust project has received funding from the European Union's Horizon 2020 research and Innovation programme under grant agreement N°774094

We will walk you through our actions and achievements in the three Lighthouse cities, **Pamplona, Tampere, and Trento**.

Then we will look at how these measures have been adapted and replicated in the Follower cities of **Cluj-Napoca, Derry, and Kozani**.

The event will bring together representatives of fellow projects, key European stakeholders, and policymakers from different countries.
